Course Title: IBM Spectrum LSF Basic Configuration and Administration for Linux

## Description:

This course teaches IBM Spectrum LSF 10.1 version.

The course is designed to give system administrators the knowledge required to implement and maintain LSF in their working environment. They will gain a solid understanding of workload resource management, cluster configuration and administration. The workshops provide valuable experience with the installation of LSF, cluster configuration and administration. The system administrator will also learn helpful hints and tips and develop fundamental troubleshooting skills.

## Objectives:

- Define concepts and terms use in IBM Spectrum LSF
- Install IBM Spectrum LSF
- Submit jobs in IBM Spectrum LSF
- Manage resources
- Use cluster query commands
- Describe IBM Spectrum LSF architecture and configuration
- Describe LSF scheduling policies
- Describe resources allocation limits
- Detail LSF cluster management
- Troubleshoot and debug IBM Spectrum LSF
- Describe and work with EGO
- Explain application integration and deployment

## Prerequisites:

You should:

- be familiar with UNIX/Linux
- **and** have basic UNIX/Linux system administration experience

No previous experience with IBM Platform products is assumed or required.

## Duration:

24 Hrs

## Topics:

LSF concepts and terminology  
LSF installation  
Job submission and control  
Resource management  
Cluster query commands  
LSF architecture  
LSF configuration  
LSF batch system configuration  
LSF scheduling policies and fairshare policies  
Resource limits  
Cluster management  
Basic troubleshooting  
LSF debugging  
IBM Spectrum LSF with EGO  
LSF application integration and deployment

**Audience:**

System administrators who will implement the LSF cluster and who will be responsible for managing and administrating the LSF cluster.
