Course Title: IBM FlashSystem V9000 Storage Implementation

Description:

IBM FlashSystem V9000 is a comprehensive all-flash enterprise storage solution that delivers the full capabilities of IBM FlashCore technology. FlashSystem V9000 offers a rich set of storage virtualization features designed to improve efficiency, management, scalability and flexibility for any storage environments. FlashSystem V9000 delivers industry-leading value to enterprises along three dimensions: Scalable Performance, Enduring Economics, and Agile Integration.

This course focuses on the planning and implementation tasks associated with integrating the FlashSystem V9000 into the storage area network, and facilitate storage application data access independence from storage management functions and requirements.

It also explains how to:

- Centralize storage provisioning to host servers from common storage pools using internal storage and SAN attached external heterogeneous storage.
- Improve storage utilization effectiveness using Thin Provisioning and Real-Time Compression
- Implement storage tiering and optimization of flash, enterprise or nealine systems usage with Easy Tier.
- Facilitate the coexistence and migration of data from non-virtualization to the virtualized environment.
- Utilize network-level storage subsystem-independent data replication services to satisfy backup and disaster recovery requirements.

Objectives:

After completing this course, you should be able to:

- Summarize the units associated with this course.
- Recall the history and fundamentals for IBM FlashSystem storage.
- Distinguish the core principles of the IBM FlashCore Technology.
- Classify the characteristics and components of the IBM FlashSystem V9000 storage system.
- Outline the ysical and logical planning requirements to setup and configure a FlashSystem system environment.
- Summarize the symmetric virtualization process converting IBM MicroLatency modules to storage resources.
- Recall the process to create host access storage on the IBM FlashSystem V9000.
- Determinate the advanced software features designed to simplify data management, improve data security, and preserve storage investments.
- Interpret the process in which to migrate data to and from the virtualized FlashSystem V9000 system environment.
- Recall the administrative functions and maintenance procedures to centralize the management and servicing of IBM FlashSystem V9000 storage resources.

Prerequisites:

- An understanding of the basic concepts of open systems disk storage system and I/O operations - we recommend the following:
- Foundations of Storage (SS00DG) or
- Introduction to Storage (SS01G) and
- IBM Flash Storage Fundamentals (SSFS1G / SSFS1WG)

Duration:

32 Hrs

Topics:

Day 1

Welcome
 Unit 1: IBM FlashSystem V9000 Introduction
 Unit 2: Emergence of flash storage
 Unit 3: IBM FlashCore technology
 Unit 4: IBM FlashSystem V9000 hardware architecture
 Unit 5: FlashSystem V9000 installation and configuration
 Unit 6: IBM Spectrum Virtualize RAID protection
 Exercise 0: Lab environment overview
 Exercise 1: System user authentication
 Exercise 2: Provisioning internal storage

Day 2

Unit 7: FlashSystem V9000 storage provisioning
 Unit 8: IBM Spectrum Virtualize host integration
 Unit 9: IBM Spectrum Virtualize volume allocation
 Unit 10: IBM Spectrum Virtualize data reduction technologies
 Unit 11: IBM Spectrum Virtualize Easy Tier
 Exercise 3: Managing external storage resources
 Exercise 4: Windows host definitions and volume allocations
 Exercise 5: AIX host definitions and volume allocations
 Exercise 6: Linux host definitions and volume allocations
 Exercise 7: Thin Provision and Volume Mirroring
 Exercise 8: Easy Tier Hybrid pool implementation

Day 3

Unit 12: IBM Spectrum Virtualize data migration
 Unit 13: IBM Spectrum Virtualize FlashCopy and Consistency groups
 Unit 14: IBM Spectrum Virtualize Transparent Cloud Tiering
 Exercise 9: Easy Tier and STAT analysis
 Exercise 10: V9000 data pool migration
 Exercise 11: Migrate existing data with Import Wizard GUI
 Exercise 12: Migrate existing data with Migration Wizard

Day 4

Unit 11: IBM Spectrum Virtualize remote data replication
 Unit 16: IBM Spectrum Virtualize administration management
 Exercise 13: Migrate existing data with Import Wizard CLI
 Exercise 14: Real-time Compression and IBM Comprestimator
 Exercise 15: FlashCopy and consistency groups
 Exercise 16: FlashCopy snapshot monitoring user roles and access
 Exercise 19: Snapshot to the Cloud
 Class review and evaluation

Audience:

This lecture and exercise-based course is for individuals who are assessing and/or planning to deploy IBM System Storage networked storage virtualization solutions. Typical students may include:

- Customers
- Technical IBM personnel
- Business Partner technical personnel
- IT consultants and architects
