Course Title: Using IBM Watson IoT Platform Connect to Manage Devices

Description:

In this course you will connect a device to IBM Watson IoT Platform and explore how this device can be managed. The device management feature enhances the Watson Internet of Things Platform service with new capabilities for managing devices. This course provides a sample agent implementation that demonstrates the following device management capabilities on a Raspberry Pi.

Objectives:

This module includes the following sections:

- Manage
- Firmware Update
- Device Reboot
- Location Update
- Diagnostic update
- Unmanage

Duration:

2.4 Hrs

Topics:

Refer to the course objectives section.

Audience:

It Services, Support, Sales
